

Tournament rules

- 1. Participants must register at the agreed time and have the ability to use the Companion app.**
- 2. Participants must bring their deck list in the Manabox app, in order to consult any aspect of their list if necessary.**
- 3. Participants may register according to the following list modality:**

A deck created by the participant:

In this case, the list must not exceed 70 euros and must comply with the format rules.

[Here the method of doing it is recorded: Valuation](#)

- 4. The tournament will consist of 3 rounds of 60 minutes duration. (If an adequate number of participants is reached**

the number of rounds may be increased and it will be communicated in advance)

5. In case the round time ends and there is no winner in the game, the active player (the player who was taking their turn at the moment the regulated time ended) will take their turn and once it ends the game will end.

6. Classification conditions:

To determine first, second, third and fourth place the elimination criterion will be used; the first player eliminated will be classified in fourth place, the second in third place, the third in second place, and the one who is not eliminated in first place.

Special classification conditions:

Situation 1:

A player is able to eliminate two or the other three players simultaneously.

Situation 2:

The regulated time has ended, the active turn has been completed and, at its end, two or more players have not been eliminated.

Both in Situation 1 and Situation 2, tiebreaker rules will be applied (the rule to apply in case of a tie will be randomly selected by rolling 1D6 at the moment the tie occurs, and it will be exclusive to each game).

6.1 Tie-break rules

Tie-break rules are additional measures adopted when it is necessary to finish games within the time limit of each round; these measures, due to their arbitrary nature, will be revealed at the start of each event in order to prevent abuse of them. In each event a die will be rolled in front of the participants and the number obtained will correspond to the tie-break rule to be applied in that event; below we collect the rules and concrete examples of the situations described in section 6:

1. Players are eliminated in order of priority:

Situation 1:

B	C
A	D

The players ABCD are seated as indicated in the previous table, and the turns proceed clockwise.

The player D launches an attack that can eliminate the players ABC.

In this case the ranking would be as follows:

1st D, 2nd C, 3rd B, 4th A

Since, with this criterion, players are eliminated in order of priority (starting from player D), therefore A is eliminated first, then B and then C, clockwise.

Situation 2:

B	C
A	D

The players ABCD are seated in the manner indicated in the previous table, and the turns proceed clockwise.

After the allotted time has ended and the active turn has been resolved, no player has been eliminated from the game; the player who made the initial turn of the game is player C.

In this case the ranking would be the following:

1st B, 2nd A, 3rd D, 4th C

Since with this criterion the players are eliminated by the original priority order (established at the start of the game), regardless of who made the active turn, and therefore the first to be eliminated is C, then D, then A, and then B, in clockwise order, as the game began.

2. Players are eliminated according to their total current lives, from lowest to highest:

Situation 1

B	C
A	D

The players ABCD are seated as indicated in the previous table, and the turns proceed clockwise.

Player D launches an attack that can eliminate players ABC.

The lives of players ABC are as follows:

Player A: 18 lives, player B: 25 lives, player C: 16 lives

In this case the ranking would be as follows:

1st D, 2nd B, 3rd A, 4th C

Since with this criterion players are eliminated by their total lives before the attacker's damage is allocated, therefore C is eliminated first, then A, and then B.

Situation 2:

B	C
A	D

The players ABCD are seated in the manner indicated in the previous table, and the turns unfold clockwise. After the end of regulation time and resolving the active turn, no player has been eliminated from the game; the players' lives are as follows:

Player A: 18 lives, player B: 25 lives, player C: 16 lives, player D: 21 lives.

In this case the ranking would be as follows: 1st B, 2nd D, 3rd A, 4th C since under this criterion after counting the total number of lives

for each player at the end of the active turn that would be the order from highest to lowest total life points.

3. Players are eliminated based on the total damage dealt by their commander, from smallest to largest:

Situation 1

B	C
A	D

The ABCD players are seated in the manner shown in the previous table, and the turns proceed clockwise.

Player D makes an attack with which he can eliminate players ABC.

The damage done by each player's commanders is the following:

Player A: 4 damage, player B: 11 damage, player C: 6 damage In this case the ranking would be as follows:

1st D, 2nd B, 3rd C, 4th A

Since with this criterion after totaling each player's commander damage and after assigning the damage dealt by the attacker (player D), that would be the order from highest to lowest total damage.

Situation 2

B	C
A	D

The players ABCD are seated in the manner indicated in the previous table, and the turns proceed clockwise. After the regulation time ends and the active turn is resolved, no player has been eliminated from the game; the damage dealt by each player's commanders is as follows:

Player A: 5 damage, player B: 16 damage, player C: 0 damage, player D: 3 damage.

In this case the ranking would be as follows: 1st B, 2nd A, 3rd D, 4th C Since with this criterion after accounting for the total damage of

the commander inflicted by each player at the end of the active turn
that would be the order from highest to lowest total damage.

4. Players are eliminated according to the total number of permanents that are not lands or tokens (nontoken, nonland) they control, from smallest to largest:

Situation 1:

B	C
A	D

The players ABCD are seated as shown in the previous table, and turns proceed clockwise.

Player D launches an attack with which he can eliminate players ABC.

The total number of permanents that are not lands or tokens controlled by each player (not attacker) is as follows:

Player A: 4 permanents, player B: 7 permanents, player C: 10 permanents.

In this case the ranking would be the following:

1st D, 2nd C, 3rd B, 4th A

Since, with this criterion, after accounting for the total number of permanents that are not lands or tokens controlled by each player after assigning the damage dealt by the attacker (player D), that would be the order from highest to lowest total of permanents they control.

Situation 2

B	C
A	D

The players ABCD are seated in the manner shown in the previous table, and turns proceed in a clockwise direction.

After the regulation time ends and the active turn is resolved, no player has been eliminated from the game; the number of non-token and non-land permanents each player controls is as follows:

Player A: 10 permanents, Player B: 7 permanents, Player C: 5 permanents, Player D: 2 permanents.

In this case the standings would be:
1st A, 2nd B, 3rd C, 4th D

Since with this criterion, after counting the total number of permanents that are not tokens or lands controlled by each player at the end of the active turn, that would be the order from highest to lowest total permanents.

5. Players are eliminated according to the total commander damage received, from highest to lowest:

Situation 1

B	C
A	D

The players ABCD are seated as indicated in the previous table, and the turns proceed clockwise.

Player D launches an attack with which he can eliminate players ABC.

The total commander damage (from all commanders) that each player has received is as follows:

Player A: 4 damage, player B: 11 damage, player C: 6 damage

In this case the ranking would be as follows:

1st D, 2nd A, 3rd C, 4th B

Since with this criterion after counting the total commander damage received by each player after assigning the damage dealt by the attacker (player D) that would be the order from lowest to highest total damage.

Situation 2

B	C
A	D

The players ABCD are seated as indicated in the previous table, and turns proceed in clockwise order.

After the regulation time ends and the active turn is resolved, no player has been eliminated from the game, the total commander damage each player has received is the following:

Player A: 5 damage, Player B: 16 damage,
Player C: 0 damage, Player D: 3 damage.

In this case the ranking would be as follows: 1st C, 2nd D, 3rd A, 4th B

Since with this criterion, after accounting for the total commander damage received by each player at the end of the active turn, that would be the order from least to greatest total damage.

6. Players are eliminated according to the total number of mana sources (of permanents) they control, from smallest to largest:

Situation 1

B	C
A	D

The players ABCD are seated as indicated in the previous table, and turns proceed clockwise.

Player D launches an attack with which he can eliminate players ABC.

The total number of mana-producing permanents each player has is as follows:

Player A: 12 permanents (5 basic lands, 3 nonbasic lands and 4 mana-producing artifacts),

Player B: 7 permanents (2 basic lands, 3 nonbasic lands, 1 enchantment and a planeswalker),

Player C: 9 permanents (4 basic lands, 2 nonbasic lands, 1 enchantment, 1 planeswalker and a creature)

In this case the ranking would be the following:

1st D, 2nd A, 3rd C, 4th B

Since with this criterion, after counting the total mana-producing permanents for each player after resolving the attack by player D, that would be the order from most to least mana sources controlled by each player.

Situation 2

B	C
A	D

The players ABCD are seated in the manner indicated in the previous table, and turns proceed clockwise.

After the end of the regulation time and resolving the active turn, no player has been eliminated from the game; the total number of permanents capable of generating mana is as follows:

Player A: 12 permanents (5 basic lands, 3 nonbasic lands, and 4 artifacts that generate mana),

Player B: 7 permanents (2 basic lands, 3 nonbasic lands, 1 enchantment and a planeswalker),

Player C: 9 permanents (4 basic lands, 2 nonbasic lands, 1 enchantment, 1 planeswalker, and a creature),

Player D: 6 permanents (2 basic lands, 1 nonbasic land, 1 mana-generating artifact and two creatures),

In this case the ranking would be the following:

1st A, 2nd C, 3rd B, 4th D

Since with this criterion after counting the total number of mana-producing permanents controlled by each player at the end of the active turn, that would be the order from highest to lowest.

***In case that when applying a tiebreak rule two or more players remain tied, the organizer will roll a die to apply an additional tiebreak rule, this process will be repeated until the tie is broken, and this will only serve to determine the position among the tied players.**

Example:

B	C
A	D

The players ABCD are seated in the way shown in the previous table, and the turns proceed clockwise.

Suppose that in this event the tiebreak rule 2 has been applied (The players are eliminated according to their current total lives, from lowest to highest)

The total lives of the players are the following:

Player A: 15 lives, Player B: 9 lives,

Player C: 15 lives, Player D: 9 lives.

It would be necessary to resolve a tie for first and second place between players A and C and for third and fourth place between players B and D.

After this, the organization rolls a die and determines as an additional criterion the tiebreak rule 4 (Players are eliminated according to the total number of permanents that are neither land nor tokens (non-token, nonland) they control, from smallest to largest)

The total number of permanents controlled by each player is as follows:

Player A: 7 permanents, player B: 9 permanents,
player C: 7 permanents, player D: 7 permanents.

After this situation, players A and C would remain tied for first and second place, but we could already confirm that player B would place 3rd and player D 4th

At this point we would apply a third criterion that would only affect players A and C

In this case, assuming die roll 3 (Players are eliminated according to the total damage dealt by their commander, from lowest to highest)

We would analyze the damage dealt by the commanders of players A and C:

Player A: 9 damage, Player C: 7 damage

In this case the tie would be broken, but if not, we would continue applying additional criteria until it is achieved.

Therefore the standings of the game would be as follows:

1st Player A, 2nd Player C, 3rd Player B, 4th Player D.

Remember that the additional tiebreak criteria are resolved only among the tied players.

7. Any spell or permanent (from now on source) able to generate extra turns or additional turns phases only may generate them once per turn (extra turns) or phase (additional phase) in a non-consecutive way, and after this, the source may not generate a new turn or phase until at least one turn from each opponent has ended.

Let's look at it with two examples:

Example 1

A player controls time sieve and 15 artifacts.

This player could potentially get 3 extra turns (since he has 15 artifacts) by tapping Time Sieve on each extra turn. Applying this additional rule, that player could gain an extra extra turn, but a second extra turn could not occur until passing the turn to the next player because the source of extra turns is Time Sieve and it has already gained (from this source) an additional turn on its regular turn, therefore it could not chain two consecutive extra turns.

In addition after that turn, Time sieve could not generate a new one until all opponents have developed at least one turn (reach the end step).

Example 2

A player controls Moraug, Fury of Akoum and has 3 fetchlands untapped.

This player could potentially obtain 3 additional combat phases (since if he sacrificed all three fetchlands in his main phase 1, he could obtain those extra phases) but due to the rule; Even if he activated all three lands, he would only be able to obtain one additional combat phase, as the same source (Moraus) could not provide more than one consecutive combat phase to its controller. Furthermore after that combat phase, Moraug could not generate a new additional combat phase until all opponents have developed at least one turn (reach the end step).

8. Any interaction that can be performed in the form of a Combo is limited to 1 interaction when resolving.

According to TCG Land: “A combo is a combination of two or more cards that give a disproportionate advantage abruptly, reaching to create a board state that can give us the victory.”

Basically there are two types of combos: the infinite and the finite, the latter usually depending on the number of cards in some zone.

When it is said that a Combo is Infinite it means we can repeat it as many times as we want and we can stop it; since by the rules if an interaction between cards generates a loop in the game where we cannot exit, it will end in a draw.”

(In our case we would apply the tiebreaker rules)

So let's see the application of the rule with the two types of combos:

Infinite combos

Timmy successfully casts twinflame and dualcaster mage in his main phase 1,

that produces the following result:

Infinite copies of the dualcaster mage with haste, infinite ETB triggers for creatures or permanents entering the battlefield, infinite magecraft triggers with spells.

How does this happen?

Requires having both cards in hand, at least one creature on the battlefield and two colorless mana and three red mana available.

Steps:

Timmy casts Twinflame paying one colorless mana and one red (targeting one of his creatures already on the battlefield), keeping priority, he casts Dualcaster Mage paying one colorless and two red.

Dualcaster Mage enters the battlefield copying Twinflame, the copy of Twinflame resolves, creating a copy of Dualcaster Mage, which in turn will copy Twinflame (the original), and so on infinitely.

Thus Timmy could decide to generate 900 copies of the Dualcaster Mage, and in his combat phase attack the other three players with 300 copies each, assigning that damage to each player and exhausting their total life, meaning he would win the game.

Now, applying the additional rule: Any interaction capable of being performed as a Combo is limited to 1 interaction when resolving.

Our player would only obtain:

1 copy of the first creature that targeted the original Twinflame.

1 original Dualcaster Mage.

1 copy of the Dualcaster Mage.

Since the infinite interaction would occur between the sources, Dualcaster Mage and Twinflame, it would therefore be limited to 1. (The will to stop the interaction or the possibility of choosing a finite number of copies would not remove the possibility of making as many as we want)

Finite combos

Timmy successfully casts Niv-Mizzet, Parun and Curiosity, which produces the following result:
Infinite card draw.

Almost infinite damage.

How does this happen?

It requires having Niv-Mizzet and Curiosity on the field, Curiosity attached to Niv-Mizzet, Timmy having some way to draw a card, and the number of cards in his library being greater than the total life of one or more opponents.

Steps: Timmy draws a card, triggering Niv-Mizzet's trigger, which will deal 1 damage to any target opponent, this damage will trigger Curiosity's trigger, allowing Timmy to draw another card and generating a repeatable cycle

from the damage of Niv-Mizzet.

Thus Timmy could deal as much damage as the number of cards he was able to draw, and this would be equivalent to the number of cards in his library.

Now, applying the additional rule: Any interaction capable of being performed in the form of a Combo **is limited to 1 interaction when resolving.**

Our player would only obtain: 1 Niv-Mizzet damage to any target as a result of the initial draw. 1 additional card draw, generated by Curiosity's trigger.

1 additional Niv-Mizzet damage generated by the draw trigger produced by Curiosity.

Since the interaction would occur between the sources, Niv-Mizzet Parun and Curiosity, and therefore would be limited to 1. (The will to stop the interaction or the

possibility of choosing a finite number of draws would not eliminate the possibility of making as much as we want within our available card limit in the library.)

9. In this format, the use of cards that contain in their rules text “you win the game”, “you lose the game”, “target opponent loses the game” and “that player loses the game” is prohibited.

10. If a player requests to rectify a move, this petition will be put to a vote among the players at the table; the requesting player may not vote, and with just one vote against the player cannot rectify or modify the move.

11. In the case of a two-headed Giant event heads, in addition to the rules already stated, the measures set out in the final annex of the document will also apply.

12. After being evaluated by the organization, any player who commits disrespect, deliberate time-wasting, attempts to hinder the tournament’s progress in any way, or undermines the sportsmanship and fun of the event will be sanctioned as follows:

1st sanction: direct verbal reprimand.

2nd sanction: automatic loss of the current round.

3rd sanction: disqualification and withdrawal from the tournament.

13. Every player upon registration commits, in a form, implicitly to comply with the structure and development of the tournament as well as to comply with both the official rules of Magic: The Gathering and the measures of this tournament.

Tournament measures

Official format: Commander

Official ban list: Banned and restricted cards _____

Number of players per match: 2-4

Additional measures:

- 1. Any interaction that can be performed in the form of a Combo is limited to 1 interaction resolving, as defined and described in point 8 of the tournament basics. (p.19)**
- 2. Any spell or permanent (hereafter source) capable of generating extra turns or additional phases may only generate them once per turn (extra turns) or phase (additional phase) non-consecutively, and after this, the source may not generate a new turn or phase until at least one turn of each opponent has ended, as described in the examples in point 7 of the tournament basics. (p.17)**
- 3. In this format, the use of cards whose rules text contains “you win the game”, “you lose the game”, “target opponent loses the game” and “that player loses the game” is prohibited.**
- 4. In this format, a maximum deck value of €70 will be established (excluding only the cost of basic lands, and pricing cards according to their average price on Magic Card Market, applying Manabox criteria for valuation)**
- 5. If a player is about to be eliminated, they may only take actions to prevent this, and under no circumstances may they take actions with the sole aim of harming another player or players in their matchup, or benefitting them.**
- 6. In case one of the following situations occurs:**
 - Situation 1: A player is able to eliminate more than one player simultaneously.**
 - Situation 2: The time limit has ended, the active turn has been taken, and at the end of it, two or more players have not been eliminated.**

Tiebreak rules, as collected and developed in point 6.1 of the tournament basics. (p.3)

APPENDIX

Additional measures for the two-heads giant format heads

In addition to the rules of the regular format, the two-headed giant format adds the following rules:

- 1. The pairings will not be random; they may be presented by mutual agreement.**
- 2. The total life total shared by each pair will be 60 life points.**
- 3. Each pair will take turn phases jointly (one main phase for both, same combat phase, etc.)**
- 4. Commander damage is removed as an alternate win condition.**
- 5. The poison counters needed for a pair to lose the game become 60.**
- 6. In the combat phase, the attacking players must select the member of the opposing pair they attack, and the defending pair may assign blockers as it sees fit, without needing to be the player being attacked. (We may use our creatures to block attacks against our partner).**
- 7. Cards that refer to each opponent in their rules text will take into account both members of the opposing pair, cards that refer to each player will take into account all four players at the table.**
- 8. Each pair's decks may not contain cards with the same name in both lists, (if a member of the pair uses Path to Exile, this card is banned for the other member); as an exception, this rule may be ignored only with basic lands.**
